LOUDSPEAKER CABLES
AND ACCESSORIES

van den Hul[®]

THE LINK BETWEEN TECHNIQUE AND EMOTION

THE MAGNUM HYBRID

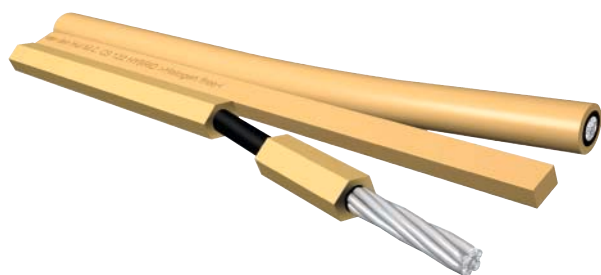

For those who need a maximum of quality metal between their amplifier and speakers we designed The Magnum Hybrid. The combination of a thick layer of Linear Structured Carbon® (L.S.C.) and AWG-8 metal conductors is a warranty for unsurpassed listening pleasure. A benchmark in speaker cable quality!

THE ROYAL JADE HYBRID

One of our most recent additions in our speaker cable program. The Royal Jade Hybrid is designed to fully maximize its transmission quality. A wonderful match of very spacious reproduction and high resolution, unsurpassed in quality when related to the price. This cable should be very high on the demanding audio lover's wish-list.

THE CS-122 HYBRID

A cable with a long standing reputation, now with innovations like a Hybrid layout and a creamcolored HULLIFLEX® jacket to complete the perfection. Both sound quality and lifespan are of the highest level. This multiple award winning cable is ideal for the demanding bass lovers who also know to appreciate a high level of detail.

THE SNOWLINE HYBRID

Our quality answer on demands for a non-expensive but soundwise very good twinlead loudspeaker cable. Looking at the cable it is hard to believe that such a slender cable is doing the job. This is the perfect loudspeaker cable in any budget audio system.

THE SNOWTRACK

The Snowtrack is the four-lead version of The Snowline. Applicable in those situations where you need a low cost solution for a bi-wiring set up. Hard to imagine that such a relatively thin cable can perform this well!

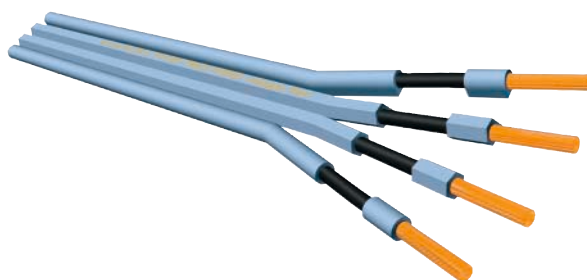

THE D 352 HYBRID

The CS-122 Hybrid's big brother. A 10 Gauge per conductor Hybrid with all the advantages of a L.S.C. coating (smooth high frequencies and a very natural transmission of acoustically correct recordings, combined with an absence of ageing effects). It's midband articulation is rarely found in any other speaker cable.

THE SKYTRACK HYBRID

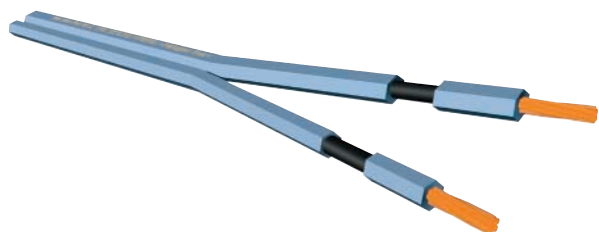

This is the four-wire version of our The Skyline Hybrid speaker cable. Our very fine metal technology combined with L.S.C. and HULLIFLEX® is all you can wish for in one cable. An excellent choice for the demanding music lovers amongst us. Very interesting solution in any lower budget bi-wiring situation

THE CLEARWATER

Already sold in many hundreds of kilometers worldwide. An extremely well balanced combination between excellent sound quality and high flexibility. The flagship in our lower priced non-Hybrid loudspeaker cable range. Strongly recommended!

THE SKYLINE HYBRID

With this cable we prove our point that an elementary but well designed loudspeaker cable can still be friendly priced. The Hybrid advantages combine a smooth signal transmission with the absence of aging effects thanks to materials like L.S.C. and HULLIFLEX®.

More information and technical specs can be found on:

WWW.VANDENHUL.COM

THE CLEARTRACK HYBRID

When you have a twinload winner and the need for a bi-wiring speaker cable arises, what's the logical solution? We took The Clearwater and doubled it. Due to the shape of the HULLIFLEX® jacket the leads are clearly identifiable, thus making it extra easy to set your system up correctly.

THE WIND MK II HYBRID

The Wind Mk II is a highest quality multi-core single conductor loud-speaker cable with a very complex, computerdesigned, strand construction. Coated with L.S.C. and finished with an outer HULLIFLEX® jacket. The result is very detailed and spacious.

HULLIFLEX®

HULLIFLEX® is a world wide registered and patented material, specifically designed by the Van den Hul company. It is very flexible and combines a high chemical stability with a superb mechanical protection of the signal conductor. It enhances both sound quality and durability of the product.

For obvious environmental reasons, HULLIFLEX® is PVC and Halogen free.

PRICERANGE

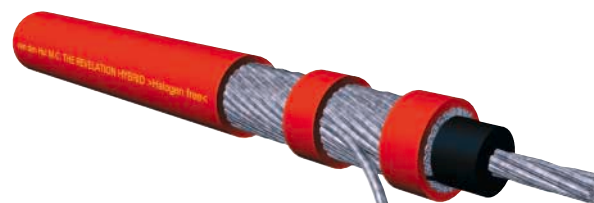

This is a price-indication. More red means more money, more yellow means less money.

THE REVOLUTION HYBRID

A thinner version of The Revelation. Truly a revolution because it has kept most of the sonic properties while losing quite a bit of it's price! Spacious and detailed without any specific accent on high frequencies.

THE REVELATION HYBRID

One of our first hybrid designs of high grade Matched Crystal OFC with a thick and very dense coating of pure silver, covered with a L.S.C. saturated layer. This centre core has a combined diameter of 7.5 mm!. Around it are 16 helically wound conductors. The combination applied in parallel gives an extremely low 1 Ohm/km resistance. It may very well be you'll never want to change your loudspeaker cable ever again! This cable has been used many, many times as a reference in various loudspeaker cable tests. With this cable audio reproduction is as it should be: perfect.

LINEAR STRUCTURED CARBON®

Linear Structured Carbon® (L.S.C.) is an uninterrupted chain of carbon atoms, perfectly aligned in multiple individually insulated fibers. It makes a thermally, chemically and mechanically extremely stable conductor, superior to any metal. It's sonic properties remain, unlike any metal conductor, the same over time. With the application of L.S.C. in our products we avoid harsh sound and, in doing so, support the spatial information. Very smooth mid-band articulation and extremely high resolution are the result.

THE THIRD®

Never before has there been a 100% metal free loudspeaker cable. We designed THE THIRD® as a first! Over 3.5 million individually insulated L.S.C. fibers are combined to build a cable with qualities not found in any metal-based cable. THE THIRD® does not age, there is no cross crystal distortion, no skin effect, it's free from directionality and time smear. It exhibits a very low 0.07 Ohm/m resistance.

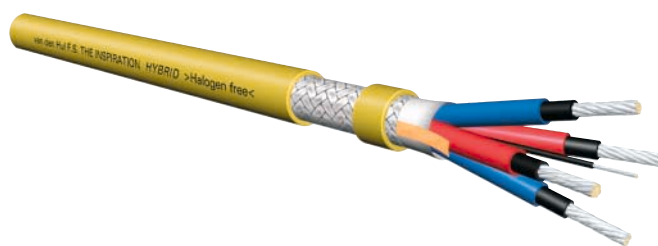

The result being extremely smooth and exceptionally detailed, natural sound characteristics. This cable will stay with you "till the end of time"!

THE BREEZE HYBRID

One of our latest additions in our state of the art cables series is this multi-core single conductor loudspeaker cable. Based on the The Wind Mk II Hybrid, The Breeze Hybrid's design comprises a higher metal cross-section area. The resulting great sound quality displays itself in a very detailed signal and a superb spacious character.

THE INSPIRATION HYBRID

Twin leaded Fusion Series loudspeaker cable, also applicable for biwiring or as an interconnect. Due to the placement of the signal leads in a so called star quad configuration and a central ground lead possible audio signal interference is avoided, thus keeping your systems noise floor down, allowing it to reveal more and richer detail without any sign of sonic harshness. Listen and be inspired!

THE POLARITY CHECKER

An easy and extremely useful tool that helps to enhance your audio system's resolution by minimising its residual ground currents. Complete with English manual. Needs no batteries to operate!

THE SOLUTION

Contact treatment and protection fluid, the very same we apply to our interconnects before packing. The Solution stabilizes contacts against chemical attacks from atmospheric pollutants. The result is time stable (it does not age) and helps improve the sound.

BUSCONNECTOR

Universal modular, solder style, speaker cable termination system. All parts are heavy 24 carat gold plated to warrant a reliable high quality connection. For maximum flexibility banana and spade are exchangeable within seconds without the use of tools.

FUSION TECHNOLOGY

Fusion Technology is one of our latest cable-innovations. It's an amorphous alloy of three metals: copper, zinc and silver. Being free from intercrystalline boundaries, the result is an extremely pure, open and natural sound without sonic harshness. In our series of speaker cables we applied this technique in The Inspiration Hybrid. This cable also makes use of our world wide patented L.S.C. coating and HULLIFLEX® jacket.

OUR PATENTS

Due to our constant stream of inventions and innovations we have to protect ourselves from less creative people. Please note that Van den Hul®, VDH®, THE FIRST®, THE SECOND®, THE THIRD®, HULLIFLEX® and Linear Structured Carbon® (L.S.C.) are all world wide patented materials and registered trademarks in 68 countries.

OUR OTHER PRODUCTS

As a High End Audio company we have many fine other products to offer beside our loudspeaker cables program. There is an extensive range of interconnects, using the same full Carbon (L.S.C.), Hybrid and/or Fusion technology, both for audio and/or AV applications (also presented in a PDF format brochure). Our phono cartridges are used all over the world and we take pride in being one of the very few companies to have a repair- and retipservice for almost any brand of cartridge. We further have some very fine electronics in our program. Our The Mainsstream powercord makes any other kind of netfiltering superfluous. Terminated with either SCHUKO, British standard, US standard or US Gold plated to IEC connectors they are applicable in most countries of the world. We also have a wide range of connectors, specialized tools and many industrial products, all manufactured with the same purpose: to make THE LINK BETWEEN TECHNIQUE AND EMOTION.
